

Marko Jagetić

Software Engineer - Zagreb, Croatia | marko.jagetic3@gmail.com | +385 99 632 6743 | [LinkedIn](#) | [GitHub](#)

Software Engineer with 5 years of experience building scalable, high-performance web applications across the JavaScript/TypeScript ecosystem (React, Next.js, Node.js/NestJS). Proven track record in microservices design, database query optimization, and legacy system modernization. Efficiently integrates modern AI tools (Claude Code, GitHub Copilot, Anti-Gravity) into daily workflows for rapid prototyping and code optimization.

Technical skills

Core & Languages: TypeScript, JavaScript (ES6+), Go, HTML5/CSS3, Python
Frontend: React, Next.js, Vue.js, GraphQL (Relay/Apollo), WebSockets, jQuery (Legacy)
Backend & APIs: NestJS, Node.js, RESTful APIs, GraphQL APIs
Databases & Tools: PostgreSQL, Docker, Git, Vite, WordPress (CMS integration)
AI & Developer Productivity: GitHub Copilot, Claude Code, Google Anti-Gravity

Experience

Njuškalo - Software Engineer

April 2026 - Present

- Spearheaded the modernization of a legacy monolithic architecture, leading the migration of core platform modules from PHP to a modern Vue.js frontend framework to improve maintainability and user experience.
- Engineered and integrated advanced end-to-end features, including a revamped, flexible delivery management system that introduced new shipping and logistics methods for users.
- Optimized system reliability and codebase quality during the transition process, ensuring seamless incremental rollouts with zero downtime for millions of active users.

True North - Software Engineer

Sep 2024 - April 2026

- Modernized enterprise-scale tax fraud detection platform by introducing TypeScript into a legacy React and Java codebase, improving type safety and maintainability while reducing production defects by an estimated 30%

- Optimized system performance by implementing strategic server-side caching, achieving 40% faster API response times and significantly reduced server load, directly improving user experience through faster UI rendering
- Lead Engineer & Technical Mentor for high-security enterprise systems, managing tax tracking and financial compliance platforms and pension management systems, mentoring 2 junior-level engineers in Vue, React, Storybook, and GraphQL best practices
- Architected and enforced scalable component design patterns (Feature-Sliced Design + Atomic Design) across multiple applications, establishing code consistency and component reusability standards for the entire front-end organization
- Designed and optimized complex database queries and indexing strategies in PostgreSQL, cutting data retrieval times for large-scale tax datasets by 35%.
- Developed secure, high-throughput RESTful APIs using NestJS and Java (Spring Boot) to seamlessly integrate the modernized frontend with legacy financial data streams.

Valere Margins - Software Engineer

Feb 2023 - Sep 2024

- Built and launched a corporate travel booking platform from the ground up using Next.js, TypeScript, GraphQL, and Material UI, featuring advanced property filtering, real-time availability calendars, and streamlined multi-step booking flows optimized for business travelers
- Developed a real-time collaborative productivity suite combining whiteboard, documentation, and task management capabilities with drag-and-drop interfaces, WebSocket-based live chat, and conflict-free collaborative document editing supporting seamless multi-user interaction
- Improved application Time to Interactive (TTI) by 25%+ through systematic performance optimization including Vite bundling configuration, strategic code-splitting, and lazy loading implementation, directly enhancing user engagement metrics
- Architected the backend GraphQL API schema and microservices layer, implementing efficient data loaders to eliminate N+1 query problems and minimize server-side latency during peak booking traffic.

AsyncLabs - Software Engineer

Feb 2022 - Feb 2023

- Sole front-end architect for an e-learning marketplace serving thousands of active users, successfully integrating internal APIs and third-party payment gateways with zero critical post-launch incidents
- Implemented comprehensive analytics and A/B testing infrastructure to enable data-driven UX decisions and continuous optimization of user conversion funnels
- Collaborated cross-functionally with marketing and product teams to consistently deliver feature releases ahead of schedule while maintaining high quality standards

Education

Backend Development Academy (Intensive Go & PostgreSQL Program) | *Notch - Jul 2023 - Aug 2023* | *Zagreb*

Intensive program focused on Go programming and PostgreSQL database management. Built a high-performance, concurrent REST API from scratch using Go and PostgreSQL, implementing clean architecture, connection pooling, and automated unit testing.
